

CHAPTER 5

THE MADONNA EVENT AND THE DARK ENTITY

September arrived with a flash containing the following data information:

9/12/00: A large coronal mass ejection, probably a full halo CME, was observed following a very long duration M1.0 event which peaked at 12:13 UTC. The source of this event was a huge filament eruption in the southern hemisphere, stretching about 30 degrees west from region 9158 (and across the central meridian). This CME could cause a serious disturbance on September 14 or 15 as it impacts Earth, minor to severe storming is possible!

For the animation on C2 of this event link to:

http://spacescience.com/headlines/images/geostorm2/cme_c2_big.gif

A Surprising CME

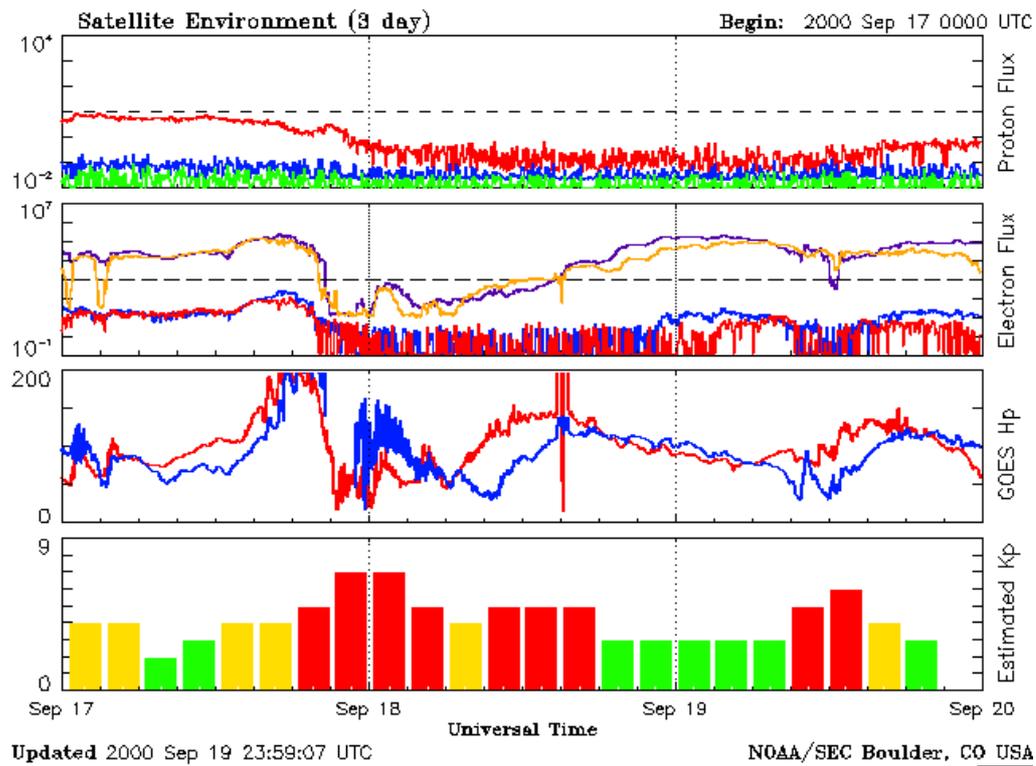

A collapsing solar filament crashed into the surface of the Sun yesterday, spawning a coronal mass ejection that could trigger aurora here on Earth

Date: 9/14/00 7:42:56 PM Pacific Daylight Time

Dear Kent, 1st time response to you but since I monitor Lasco regularly this one I felt I needed to bring to your attention. At approx the 7 to 8 o'clock position from the sun and approx 2/3 of the way out from center an object appears that is moving in the opposite direction of background stars.

9/15 Region 9165 produced a long duration M2.0 flare peaking at 05:32 UTC. Early images indicate there may have been a coronal mass ejection as well. As the region is currently near the center of the solar disk, any CME will highly likely impact Earth, and could cause active to major storming on September 17 or 18.

And on the 17th the great slam:

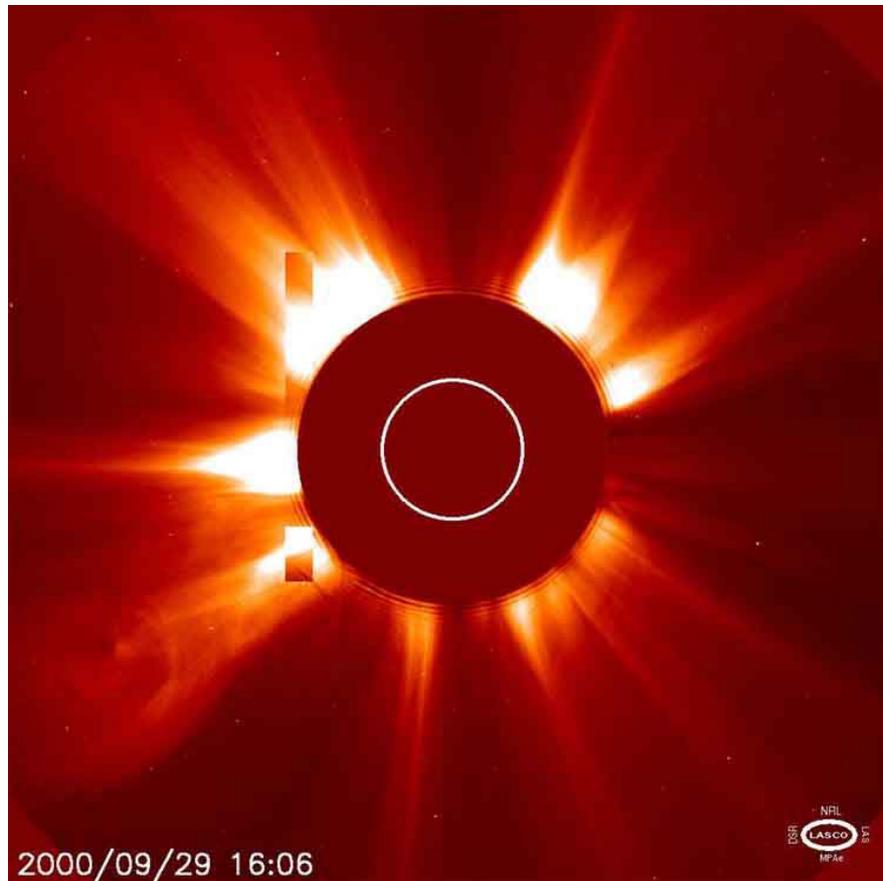

A make over of the event from ORBIT

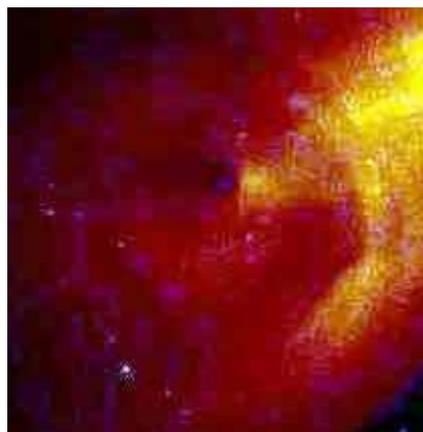

A complete overview of this event and associated earth changes may be read in one of our Ambilac articles entitled A WAKE UP CALL that may be linked at http://www.ambilac.com/newsletter_32a.html

THE DARK ENTITY,

September 29th the following was observed on all satellite images – notice the strange anomaly at 7 o'clock in addition to the blanked out sections.

Close up

See <http://www.cyberspaceorbit.com/sun/9-29.html>

Also observed on the LASCO C2 mil sat

Date: 10/5/2000 5:44:10 AM Pacific Daylight Time

The magnetic storm that began on Tuesday continues and has become more intense today. Planetary magnetism readings as high as "7" have been reported and a magnetic-A index of greater than 50 was reported this morning ... making this a major to severe magnetic storm event

TOKYO, Japan -- A 7.3-magnitude earthquake on Friday swayed skyscrapers in Tokyo, shattered windows and knocked people off their feet as it rocked areas of western Japan.

Comment from one of our Russian researchers on the above event

Date: 10/1/00 7:47:23 AM Pacific Daylight Time

Twenty years ago I was reading excellent book written by some American astronomer (forgot his name) describing instant space travel by using a black hole, based on Einstein-Rosen's bridge theory (from here all space travel wormhole stories originate). This theory implies that on the exit side should be something opposite to the black hole, a white hole. A Sun.

That what Ambilac group predicted could well be, not the Sun birth of a Planet, but arrival of king-size ships not much unlike Death Star from Light Works.

All the best.

IZAKOVIC

In addition:

Date: 10/14/00 12:48:53 AM Pacific Daylight Time I live in the Okla City metro area. Tonight on the local news, they reported that people all over the state had been calling in about something they had seen in the sky. The news station reported it as a bolide type meteor. Apparently it crossed a large portion of the state from South to North. When it was first seen, people noticed a 'smoky' or dirty tail (late evening), but after the sunset it had a tail similar to a comet. In its final stages it apparently broke into several pieces. Unfortunately we didn't see it here because we are having cloud cover for the first time since June.

While this message also came in

Date: 10/13/00 9:31:31 PM Pacific Daylight Time

10/13/00 2:00 PM GMT came and went without incident. Intel reports intruder fragmented and lost punch. Large piece skipped off the grid over the Central Mediterranean in the area of Malta (North and West of Cairo). Grid is back on-line and powered. One disturbing note is that sources in the Azores report a strong electromagnetic residual signature coming from the Brookhaven area. Hypothesis is that an electromagnetic beacon is DRAWING comets and asteroids in our direction. It shuts down so that objects will "Just Miss" us. Their calculations were off this last time for sure. Someone out there likes us and fragmented the beastie or we would have been hit a glancing blow. The grid would have stayed up, but would have been weakened considerably. The consequences of this signature in the crust resulted in shock waves that may have ignited that mid Atlantic quake. We are still running calculations to confirm this. Anony Mous

List of fly by asteroids at this time

Oct 15 -[Oct 07] Asteroid 2000 TG2 Near-Earth Flyby (0.257 AU)

Oct 22 -[Oct 09] Asteroid 2000 TU28 Near-Earth Flyby (0.088 AU)

Oct 25 - Asteroid 2340 Hathor Near-Earth Flyby (0.1970 AU)

Oct 31 - Asteroid 4179 Toutatis N

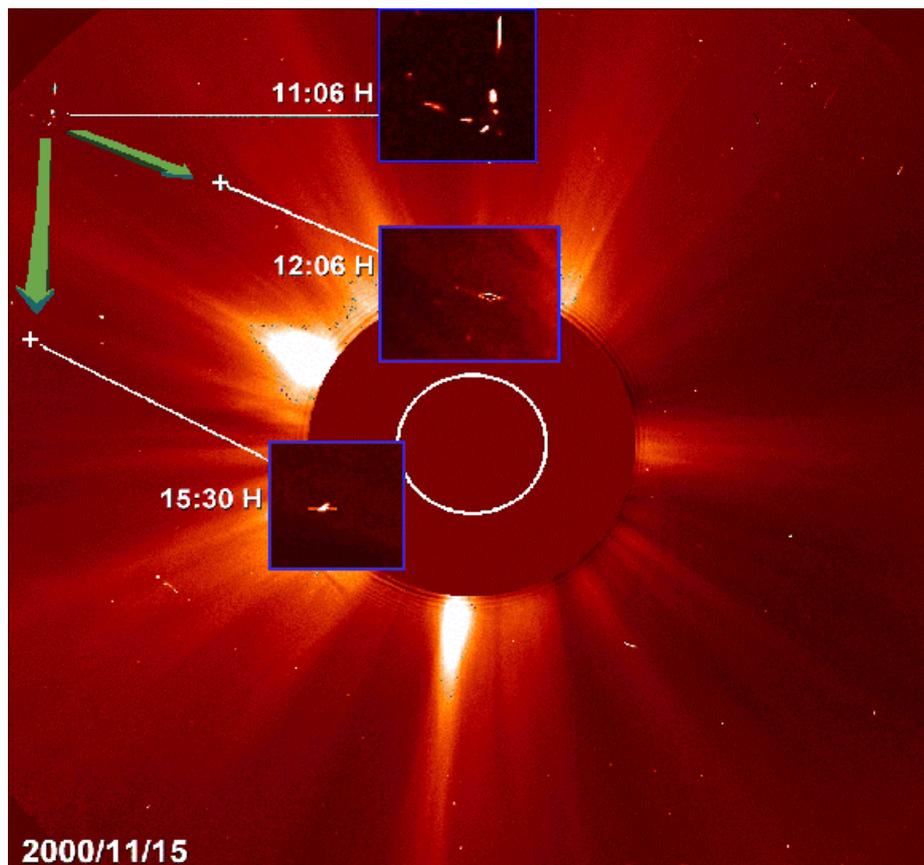

On November 8th a massive proton blast occurred and a severe space weather storm began pounding Earth, which was expected to threaten communications, satellite operations and possibly astronauts and airline passengers -- especially pregnant women -- through Sunday.

A severe solar radiation storm this week prompted NASA to order astronauts aboard the International Space Station to take shelter in a more heavily shielded Russian-built section of the orbiting outpost.

See article at <http://www.rense.com/general5/seek.htm>

Additional solar anomalies were captured in November as can be seen below with these set of images, enhanced by Jose – more at:

http://museum20000.homestead.com/Gallery_7.html

The Volcano at POPOCATEPETL erupts on December 19th, while on the 30th an asteroid narrowly misses earth see

<http://news.bbc.co.uk/1/hi/sci/tech/1084476.stm>

Astronomers have tracked a large asteroid moving close to Earth.

The 45-metre-wide (150 feet) space rock, travelling at more than 30 kilometres (18 miles) per second, came within 480,000 kilometres (300,000 miles) of the planet. Although this is close in astronomical terms, there was no danger of an impact.

CHAPTER 6

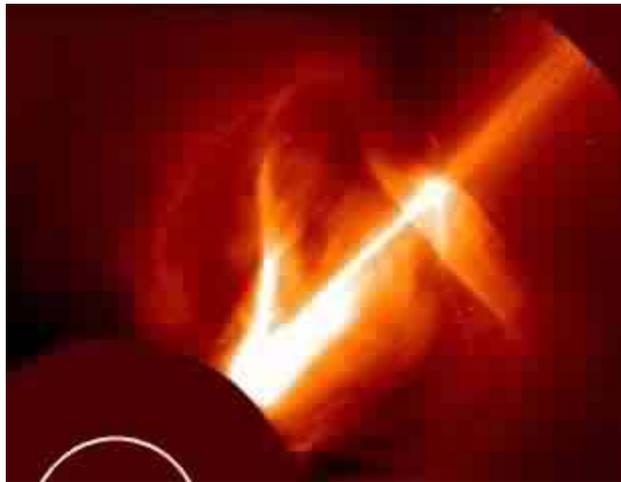

SUN SWITCHES POLARITY

The year 2001 commenced with quakes and fireballs

<http://allafrica.com/stories/200101130073.html>

Approximately 21:53 (Mountain) a major fireball was seen from locations in CO, MT, WY, NM, AZ (?), KS, SD and NE. The reports are inconsistent as to the direction the object was going, and some seemingly credible reports suggest that there may have been more than one object that was seen. Several witnesses in Boulder, and northern Colorado, report that the apparent diameter of the fireball was approximately equal to two diameters of a full moon (!!).

While at the end of January this observation was made on C2

Comment.

NASA appears to be puzzled with the recent escalation of CME's. There is no explanation for the increases. Nasa does mention they are now aware there may be less of a connection between CME's (coronal mass ejections) and solar flares than previously considered.

Struggle Seen As Sun Switches Magnetic Field Polarity

"In the past few months, the direction of the magnetic field observed by Ulysses fluctuated between the old and the new. Even now, there are periods when the old polarity is still present.

"Clearly, a struggle is going on in the Sun's magnetic field, with freshly emerging new polarity regions racing towards the Polar Regions, encountering the slowly decaying older polarity regions.

We know that the new polarity will win through, but the battle is still on for another few months."

See article at

<http://sci.esa.int/content/news/index.cfm?aid=11&cid=34&oid=25948>

Extract

26-Jan-2001 During solar maximum, when the Sun's activity is at a peak in its 11 year cycle, the polarity of its magnetic field changes: the north pole takes on the polarity of the south pole and vice versa. Now, for the first time ever, a spacecraft has witnessed this process from a front-row seat high above the Sun's south pole.

February 15, 2001 -- You can't tell by looking, but scientists say the Sun has just undergone an important change. Our star's magnetic field has flipped.

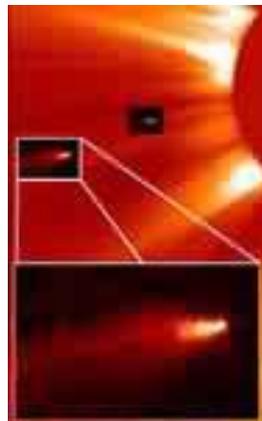

The Sun's magnetic north pole, which was in the northern hemisphere just a few months ago, now points south. It's a topsy-turvy situation, but not an unexpected one.

Full article at

http://science.nasa.gov/headlines/y2001/ast15feb_1.htm?list95940

Date: 2/17/01 10:04:54 PM Pacific Standard Time There is an object approaching the sun. Lasco C2 images are coming in, in 5 and ten-minute intervals. Normally they are every thirty minutes.

<http://www.cyberspaceorbit.com/frontpage/frontpage.html>

MARCH

20010327_0006] kent**

Date: 3/27/01 6:32:04 AM Pacific Standard Time

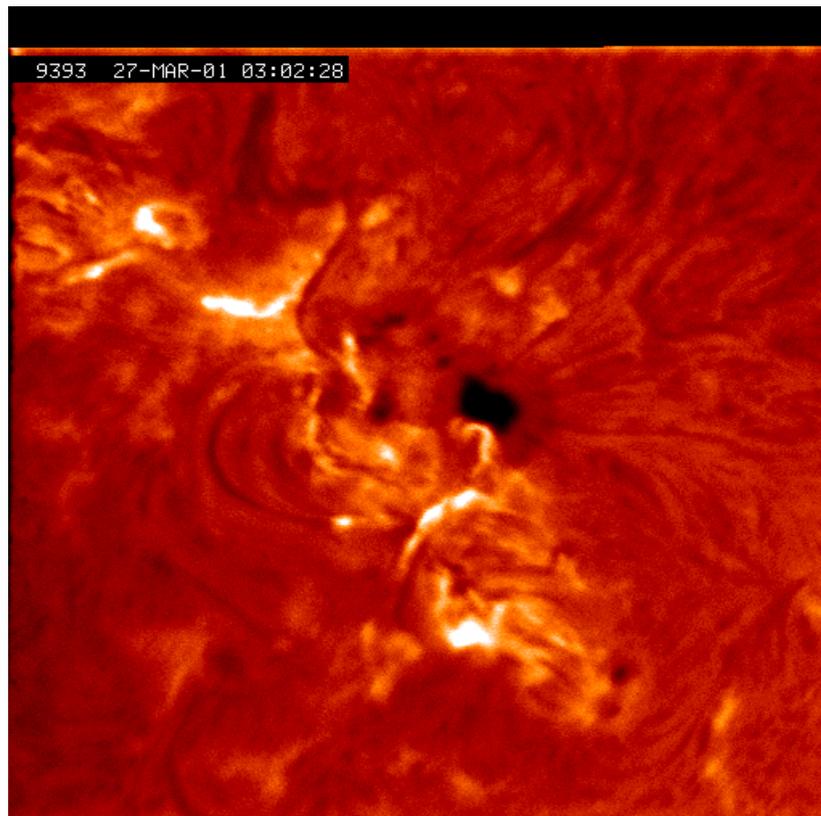

No, they even shut off the Navy site after 00:06am. I have no idea why they don't want us to see a "comet"!

In a message dated 3/27/01 6:36:12 AM Pacific Standard Time, ANON writes:

I just sent an email to the Webmaster of the SOHO site to ask him if the missing images can be posted so we can see the comet's approach.

On the same date Solar torpedoes were observed - for animation link to <http://www.cyberspaceorbit.com/sun/3-27-01torp.gif>

EIT caught this image

X CLASS PROTON FLARES INBOUND

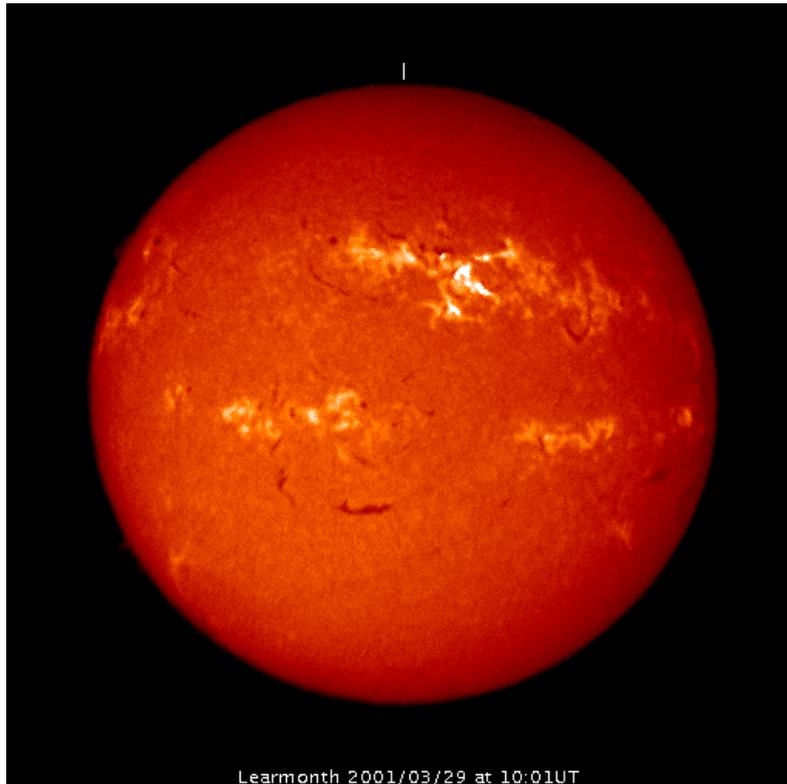

Comment

10:23 UT on March 29: Region 9393 has finally produced its first X class flare. The flare peaked at the class X1.7 level at 10:15 UT. A significant earth directed coronal mass ejection will likely result from this event further details will be posted within the next few hours.

Comment

12:40 UT: A full halo CME is in progress. Although it's a bit early to tell the CME appears to be fairly fast and could reach Earth within the next 2 days. The flare does not appear to have been a significant proton flare.

The culprit

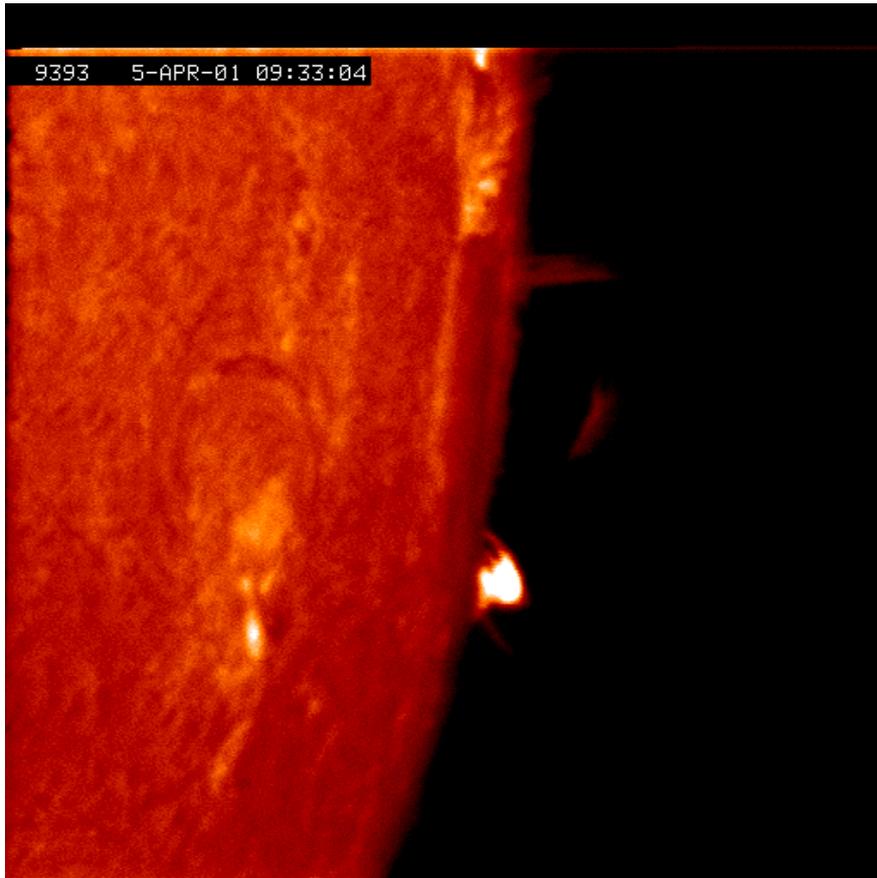

For Aurora gallery for march-April 2001 – link to http://www.spaceweather.com/aurora/gallery_31mar01.html

While Elfrad recorded explosion as at March 31st at 00:52:04.3 indicating the time of arrival and the duration of the first wave, which was 9 minutes and 20

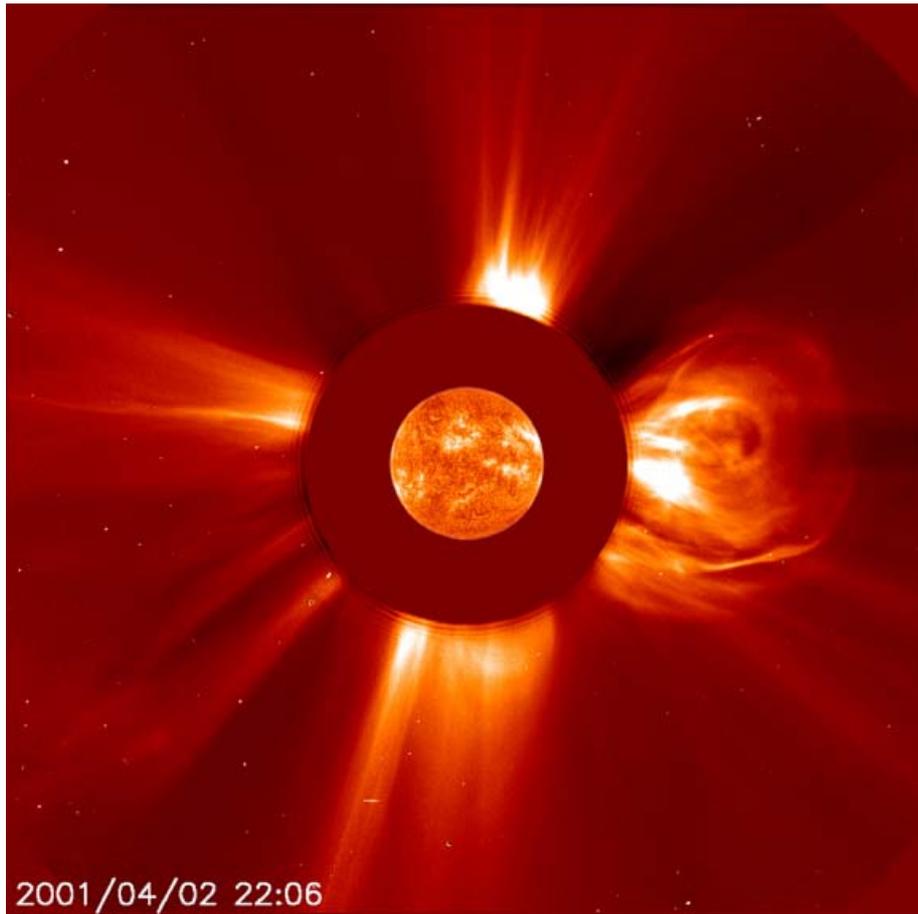

How about this for a shot of a developing flare on April 5th – EIT

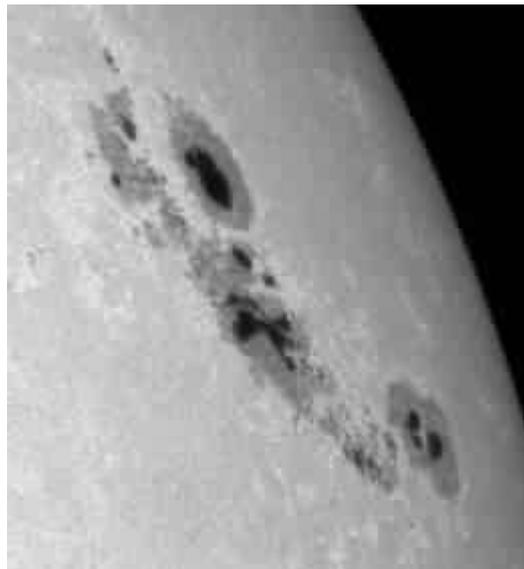

To view all the data of the biggest solar flare on record, including movie frames link to <http://sohowww.nascom.nasa.gov/hotshots/X17/>

To view the resulting CME that was captured on C2, and was the largest sunspot on record for ten years, see the image below.

Further data at
<http://www.sciencedaily.com/releases/2001/03/010330224946.htm>

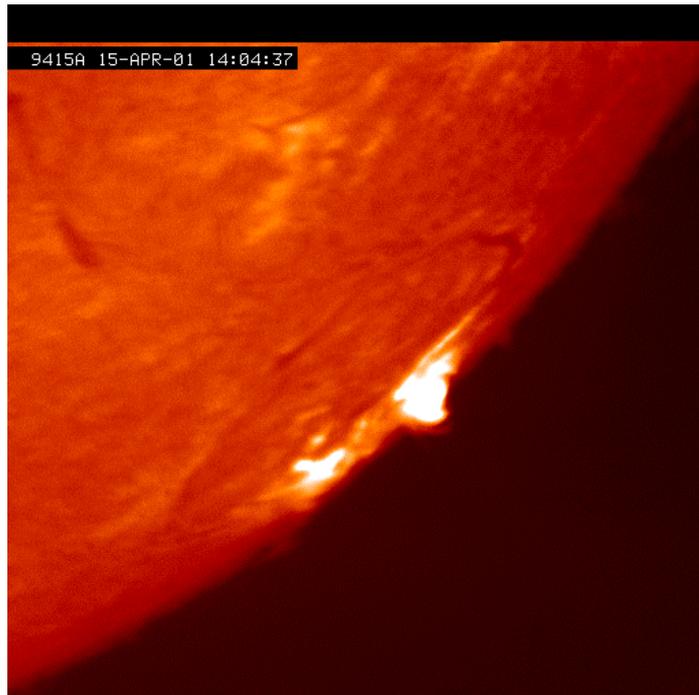

While here is the coronal hole in question

Date: 4/11/01 12:03:19 PM Pacific Daylight Time

The interplanetary shock wave expected to arrive today has done just that. Magnetometer readings at the GOES satellites are as volatile [high and low] as I've ever seen. Even the newly expanded scale, especially into the negative magnetism, is being tested by this event.

And on 14-15th another Y class flare.

It was at about this time that we began reading interesting posts on a number of anomalous activities on Jupiter – on going.

Comment

April 13, 2001 Web posted at: 9:57 AM EDT (1357 GMT)

An extraordinarily bright flare erupted on Jupiter, puzzling scientists who detected the burst with the Hubble Space Telescope.

Looking at Jupiter's aurora, the most powerful in the solar system, researchers observed an intense aurora emission that increased 30 times in brightness within seconds before plummeting back to normal levels.

"The flare is far brighter than anything we've seen before at Jupiter," said Randy Gladstone, member of a scientific team that reported the event in the April 12 issue of the journal Nature. "The amount of energy released is comparable to an atomic bomb blast."

More information at <http://news.bbc.co.uk/1/hi/sci/tech/1272268.stm>

C3 image at 17:47 25 April – an unusual anomaly of which we will see more of as we progress.

While to cap it all a few days later we receive this information:

May 2, 2001: Astronomers reported that the nucleus of comet C/2001 A2 (LINEAR) has apparently split in two

CHAPTER 6

WHERE HAVE ALL THE MOONS GONE?

SOLAR ECLIPSE, MARS, GLOWING COMETS AND HIGH SUNSPOT ACTIVITY.

That about sums up the period from June onwards, exciting observations and again many questions, but not many answers forthcoming.

Comment

High Sunspot Count, CME's, Glowing Comet and Full Solar Eclipse...06/17/01
by Mitch Battros (ECTV)

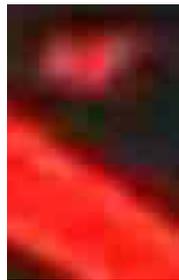

Wow, what a combination. All within days of each other, such a cosmic combination just has to be connected. Is it possible 'something' is causing an ever-increasing sunspot count, which in turn is causing large solar flares and CME's? And how about this coming 'full solar eclipse', which happens to fall on the exact day of the Summer Solstice, June 21st. Now throw into the mix, an ever-brightening comet known as "Linear C/2001 A2".

See - <http://cyberspaceorbit.com/ecpz.htm>

Solar eclipse 2001 – notice the anomaly (again) at 1 o'clock position

Detailed images

While June 15th witnessed a large CME – for animation of C3 link to-
http://www.spaceweather.com/images2001/15jun01/c3_cme_big.gif

This was followed in July by a period of earthquakes in the USA – see
<http://cyberspaceorbit.com/spokanegx.htm> while Peru suffered a major quake;
01/06/23 20:33:14 UTC 16.14S 73.31W Depth: 33.0 km 7.9M NEAR COAST
OF PERU

Interestingly the BBC science news for July 3rd 2002 posted this

Tuesday, 3 July 2001, 00:53 GMT 01:53 UK

Large world found near Pluto

Astronomers have found one of the largest objects ever detected
orbiting the Sun

<http://news.bbc.co.uk/1/hi/sci/tech/1419508.stm>

So, worlds discovered while moons are lost?? – It was at this time when
heated discussion was on-going (and still is) with reference to the missing
moons of Mars, Phobos and Deimos. On June 17th information was doing the
rounds that there had been some unusual activity on the surface of Mars, The
main contention being that the planet was suffering from a massive surface
dust storm. For images and movies link to
<http://tes.la.asu.edu/dustindex.html>

However, Van Flandren the astronomer, and others suggest the effects are the result of an asteroid hit.

Comment

Mars Dust Storm Caused By Asteroid Hit?...08/03/01
by **Mitch Battros (ECTV)**

I just returned from the studio having just completed my interview with Dr. Tom VanFlandren. I'm still trying to catch my breath. What he had to say was astounding. You may remember the news of a "sudden dust storm on Mars" which was released July 19th by NASA. NASA's statement: On June 26, 2001, the Hubble Space Telescope spotted a dust storm brewing in Hellas Basin on Mars. A day later the storm "exploded" and became a global event

See <http://www.cyberspaceorbit.com/vanflan.htm>

While Kent Steadman commented –

Almost exactly a year to the day prior to the beginning of the Mars super storm, comet 76P/West mysteriously went missing after a close encounter with the red planet. Is what we are seeing now, the delayed result of last year's encounter? If that is so, can we confirm if Phobos is currently still maintaining it's unstable, reverse orbit around Mars?

More on the Phobos disappearance later, however in the meantime we were seeing increased fireball and meteorite activity – link to <http://www.cyberspaceorbit.com/pennmeteor.html>

While on August 29th we see that HAARP was on full alert for 12 hours –

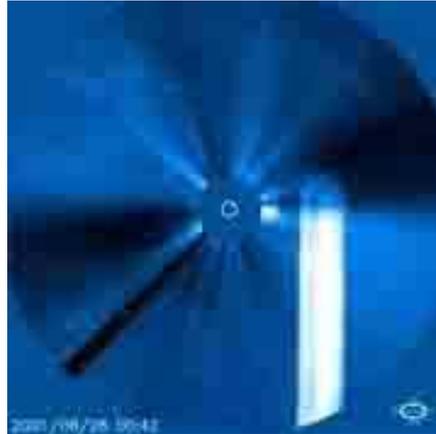

SPECIAL REPORT

LATEST HAARP NEWS:

(1) HAARP was operating on its UPPER frequency of 6.965 MHz at FULL power for almost 12 hours all during the daytime on Monday 08/27/01. Multiple ionospheric worldwide skip during the daytime on 80 meters is "rather rare" if not impossible, so it must be an extremely powerful ground wave propagation.

See <http://cyberspaceorbit.com/hrpflpwr.htm>

And on 26th at 00:42 on C3 an unusual anomaly almost like a vertical stargate 1

Now we return for more updates concerning the missing moons, Phobos and Deimos.

Comment

Comment

During the last week, Glen Deen has attempted two recovery sightings of both Phobos and Deimos with a 24-inch f/16 Cassegrain telescope. While dimmer field stars were visible, neither Phobos nor Deimos can be seen. It is as though they have suddenly vanished!

WE ARE URGENTLY ASKING ALL ASTRONOMERS AROUND THE WORLD TO IMMEDIATELY ATTEMPT RECOVERY SIGHTINGS OF BOTH PHOBOS

For more comments on the scenario link to http://cyberspaceorbit.com/phobos_deimos.html

For background information on Phobos link to <http://www.solarviews.com/eng/phobos.htm>

More on this scenario later on, for now we will deal with even more solar torpedoes, this situation gets weirder by the week!

September 9th sees more observations of solar torpedoes

WTC AND 9-11

September 11th of course we saw the tragic event of what we now term 9-11

Date: 9/11/01 8:46:09 PM Pacific Daylight Time

New HAARP Like signal, very power full now on 6965 Khz (6.965Mhz).
5-second data bursts. Very powerful signal. Location of reception -
Houston. Longwire antenna running east west.

Tuesday, September 11, 2001 4:15 PM

Brother Jonathan Gazette News Alert:

WORLD TRADE CENTER-PENTAGON EVENTS ALERT!!

HAARP began maximum daytime missile shield transmission shortly after
attack on the WTC and the Pentagon.

Brother Jonathan Gazette was the first to break the WTC Plane attack at 5:55
am or less than 10 minutes after the first plane hit the first tower. This
was 20 minutes before any news item about the WTC was put on the Internet.
The news alert about the second plane crashing into the second tower was on
the Gazette within less than 30 seconds, again ahead of all other news
sources.

<http://www.cyberspaceorbit.com/WTC03.htm>

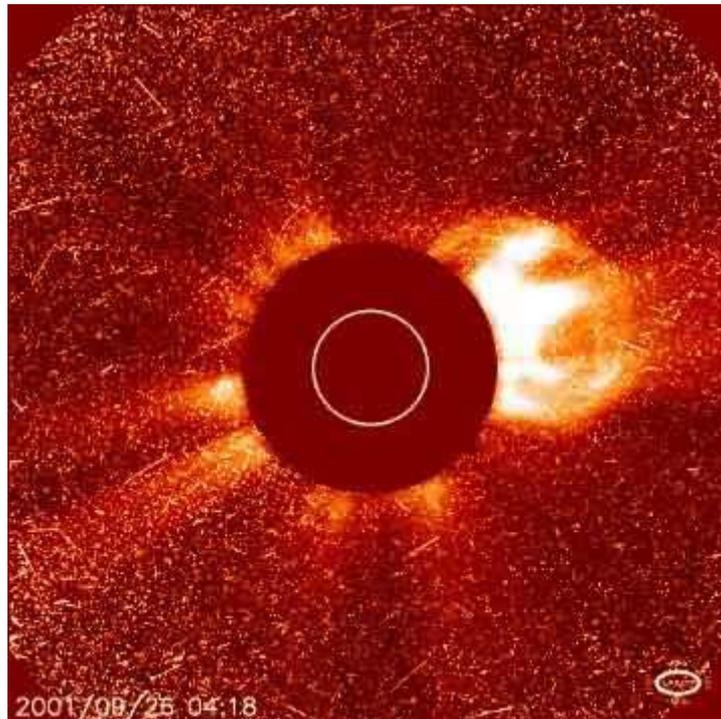

A plethora of data and information flashed around the globe on this event, and
I will not go into detail here, apart from a few related connections. However, to
skim through the information link to

<http://www.cyberspaceorbit.com/indexback8.html>

September 18th saw the return of the Sol cruiser – image C3 at 0:642

Through to September 25th we witnessed a number of solar flares and anomalies culminating with this C2 image on 25th

Full information at ARE WE GETTING COSMIC HELP

<http://www.cyberspaceorbit.com/warrant12.htm>

In addition, link to Rusty for this period to see the many solar anomalies at http://rustys_retreat.homestead.com/SOHO.html

Date: 10/11/01 11:57:10 AM Pacific Daylight Time

Within the past hour a severe magnetic disturbance has begun to arrive at Earth. This is most likely related to the very large CMEs that were observed on the 9th and 10th. A magnetic storm watch for magnetic-A indices of greater than 20 [a lower level watch really] was already in effect for Oct 12. A magnetic-A index warning for values of greater than 30 was recently issued by the SEC, as well as warnings for planetary magnetism [Kp] readings on the 0-9 scale.

Meanwhile – back on Mars the dust storm still rages - Friday, 12 October 2001, 12:51 GMT 13:51 UK

Giant storm shrouds Mars - A giant dust storm, larger than any seen on Earth, is ravaging the face of Mars.

<http://news.bbc.co.uk/1/hi/sci/tech/1595338.stm>

The scenario surrounding the above event, the missing moons of Mars and their present location, is of great importance to the activity of the sun and the much discussed so called planet X. We will be dealing more on these issues in later chapters.

CHAPTER 7 continued>>>>>>
