

# SO-HO STRANGE

## AUTHORS PREFACE

Millions of miles up in space are a number of military-Government satellites, a number of which are designated to capture images and data 24 hours a day of our sun, the project is under the joint general [NASA/ESA SOHO](#) where SOHO refers to the Solar and Heliospheric Observatory. In recent years observers have been witnessing a number of peculiar and intriguing anomalies occasionally (and increasing in frequency) materialising around the area of the sun. Many of these anomalies on appearing have on occasions been blacked out by NASA officials, or the images completely taken down for a few hours. Because of the frequency and blatant obvious signs they now show, it seems that on most occasions officials have ceased to alter these images.

The “craft type anomaly has been called by various names, one of which was named a few years ago by Liz Edwards of iwonderproductions, and termed “Solar cruiser”. It has also been referred to as the Solar plasma carrier, however, since those sightings many other even more interesting phenomena have been witnessed. All of these anomalies are discussed in detail with a plethora of innovative illustrations and photographs captured from the satellite imagery

In recent times there has been a sudden increase in these “anomalies” causing a torrent of interest and in turn creating more questions than answers. Thus the purport of the work herein is to cover the historical background and on going sightings around the sun in an attempt to discover what exactly is going on. Needless to say with the recent increase in these anomalous sightings that appear even more complex each time, the summing up may appear even more bazaar. Or is it??

From the early sightings of these unusual solar events, such as “The Orca” and sun cruisers right through to the most unusual sightings we are witnessing today.

Indeed, may it be that our concept at Ambilac that a new planet has and will be formed from the sun has been realised?

The intention of this work was to be published in book form, however, due to the very nature of the speed of these increasing sightings and as the images are so fantastic, the CD ROM form was chosen. Utilising this method coupled with interactive websites makes for an exciting and visually stunning viewing. As the adage says **SEEING IS BELIEVING**.

Each section has many Internet links and access to the many satellite images as well as the photographs contained on the CD. There are also links to the

many related articles on this subject including a number of serious researchers who have worked hard on capturing and analysing these images (see acknowledgements).

I make a personal summing up in the epilogue, including the connection with "Planet X" however, the complete truth may never be discovered, all I offer is the opportunity for the reader to study the work and come to a personal conclusion after weighing the evidence supplied.

ENJOY.

Howard Middleton-Jones

#### A NOTE ON AMBILAC RESEARCH.

It was due to an intriguing set of synchronistic events, (concerning the then current investigations in Egypt) early in 1998 that I teamed up with James Wilkie of AMBILAC. Since that time we have worked constantly on the complexities of the layout and design of the Giza Plateau Cairo and the connection with certain books of the Bible, in particular the Books of Genesis and Exodus. The work, in a nutshell, demonstrating that whoever wrote the book of Genesis had intimate knowledge of the Plateau, and vice versa

This research led us onto an amazing inter connected path, as described in detail in all our articles and books (Giza Genesis series) offering the premise that the Plateau layout demonstrates a concise cosmic template of our very existence. From this work we realised why certain on going events were occurring. Events such as the passing of Hale Bopp, Comet Lee and the connection with the anomalies of the sun and much more.

It was at this point our interest grew in the solar anomalies that began to be appearing, where we realised that if any of our work was to be recognised, then we had to collate as much data as possible from the available instruments. This was one method at least whereby people could check the incoming data, at if and when it was available.

Access of the SOHO and other instrumentation assisted greatly in the demonstration of part of our work, and we maintained a constant surveillance on these and other data sets. A "watching brief" by us and other interested researchers led to the observation and image capture of one of the most bizarre scenarios concerning the sun. This occurred in September 1999 and it

## ACKNOWLEDGMENTS

To collate all of this available material in order to offer a reasonable perspective on what is actually occurring would seem an impossible task. The research data over the last five years is awesome, and therefore could not be collated without the assistance of a few good people and groups. First, believe it or not, I would like to thank NASA and the SOHO – LASCO team for making available the satellite images we have analysed. For without those we would not realise what is occurring around the sun today. Thanks guys, even if you do scrub out the best pictures occasionally, or knock the system down when we most need it!

A person I must first thank is Retha Retherford at Rusty's Retreat [http://www.homestead.com/rustys\\_retreat/](http://www.homestead.com/rustys_retreat/) where Rusty has been studying these solar anomalies since 1995 and has contributed greatly in this compilation by providing many hundreds of captured images. Her tireless work was considerably visually assisted with the later enhancements of Jose Garrido of Portugal <http://ovnis.esoterica.pt/princip/menu.htm>

Kent Steadman of ORBIT fame at [www.cyberspaceorbit.com](http://www.cyberspaceorbit.com) is another tireless worker in the quest of truth and understanding and his work at ORBIT reflects the many unusual cosmic phenomena that is occurring today – thanks Kento.

**One person that we seem to have lost contact with is Liz Edwards, ne of iwonderproductions. Liz carried out much work in the early days of these solar sightings and coined the term Solar Cruisers that we often refer to today. Unfortunately, the site Liz used to run is no longer available, however many of the relevant pages are captured and available at ORBIT. I also understand that at the time of writing, January 2003, Liz is very poorly and unable to access her computer, may I take this opportunity to wish her a speedy recovery and to let her know that many people are thinking of her.**

Finally, I must thank Gary Goodman and the team at the Millennium group [www.tmgnow.com](http://www.tmgnow.com) who also have painstakingly worked in this field and like ambilac have offered many controversial articles surrounding present cosmic events.

In research such as this there are many others who have at one time or another submitted their ideas and views, all of which go to assist in developing a fuller understanding, To all those I offer my thanks and trust we can all continue in that on-going quest for the truth.
